

# Results: North American QSO Party, CW —January 2021

## Cycle 25, Where Are You?

The 2020 – 21 contest season started off showing some very promising propagation on the higher bands. Fifteen meters was good for some long-duration openings to DX, while 10 meters was good enough for short runs and good multiplier totals. After the January 2020 NAQP CW I predicted that we would see 2,000 QSOs by a single op, with the expectation that Solar Cycle 25 would help us out a little. Unfortunately, wishful thinking does not make propagation or add QSOs to the log. Ten meters was almost a complete bust for everyone this year, which at least leveled the playing field a little more with everyone mostly stuck to five bands instead of six. But as we have seen all contest season, participation was fantastic. This January saw 1,407 logs submitted versus 1,146 last year. Imagine how great it will be with Solar Cycle 25 holding up its end of the bargain.

NAQP is always a great place for a new contestants to dip their toes into the water and see what life is like outside of FT8. It is really great to see the increase of emails and comments from hams saying the NAQP was their first CW contest, or perhaps even their first contest on any mode. This year, Steve, VA7STQ, said his single contact in NAQP CW was his first ham radio contact ever. This is very cool, and we certainly hope to work Steve in all contests for many years to come. Another interesting entrant was Rick, N6XI, who operated from his home station in the SCV section, and remotely on a second radio in the SV section about 150 miles away. While his effort was only eligible as a check log, it is still fun to think about the possibilities. It would be fun to operate one station in W6

and one station in W1 at the same time to take advantage of propagation on both coasts.

David, N6AN, operated from a SOTA QTH he hiked up to with his KX3 and a wire antenna. Many QSOs were made while he logged on paper and sent by hand, using an old music stand as his table. That is not something we usually see in the January edition of the NAQP, even if he was in sunny California.

## Low Power

The top four stations in the Single-Operator, Low Power category are the same as last year's, but with a different order of finish. Conditions were very similar to last year's, with the southern stations having a distinct propagation advantage that they really squeeze every QSO out of. When we talk about winning contest efforts, often the question that comes up is, "Did I truly maximize my score?" These top-tier ops are always trying to squeeze out that extra 1% to win. I do believe we have seen another year

of truly maximum scores from the top four operators this year.

On top was Axel, KI6RRN, operating the fantastic WA6TQT station as NO6T. Axel bested his own California record set last year and even had a 334 hour while doing it. Second place goes to Steve, N2IC, who got oh-so-close to that magic 2,000 QSO mark again. Axel's extra multipliers were enough to overcome a small QSO deficit. Piloting the new N6WIN station in Arizona was Dan, N6MJ, operating as ND7K. Dan also set a new state record, besting his own record from last year. Pat, N9RV, came in with a great fourth place showing from his well-equipped station in Montana. Stan, K5GO, finished in fifth place from the Cayman Islands, operating as ZF9CW. While the top four operators used a combination of 2BSIQ, traditional SO2R, and even adding a third radio into the mix, Stan showed a lot of us how it is done with just one radio. Other noteworthy state or province records were broken by VE5MX in Saskatchewan, NP4Z in

## Single Operator Top 10 Breakdowns

**N7DX** operated remotely with K7RL in M2 and used the contestonline.com real-time scoring web site for motivation.

**W4WF** and **K1MM** teamed up for a close second place finish in M2.

Puerto Rico, and KM7W in Maine.

#### **QRP**

The QRP battle this year was a nail biter and required the log checkers to really dig deep and make sure the order of finish was correct. Toni, NØNI, came out on top after the dust settled to edge out Alan, KØAV, by 20 points. That's a difference of less than one contact. Toni's station in Iowa has been a beacon for many years, but that all changed in August of 2020. Toni reported a big storm cost him some 1,200 feet of tower and 35 Yagis. Not one to be silent, Toni found a way to get on the air after that devastating storm. He used mostly wire four squares for this contest, along with a 750-foot rhombic. Most of his 20-meter QSOs and many of his 40-meter QSOs were on the rhombic.

The third and fourth place QRP finishes were by N7IR, and W7YAQ, respectively. Similar to the Low Power category, we see many of the same operators at the top of the QRP category each contest. What's the draw that keeps them coming back? Alan, KØAV, notes that the skills required of a low power entrant are the same for a QRP station. One of the major differences is that the QRP entrant is

constantly "on the move," trying to find something to work. Knowing when to come back to a pileup on a multiplier, finding the right mix of running and search and pounce, and figuring out that magic run frequency when you are not loud enough to bore a hole all are things the QRP operator has to think about. With scores so close, even one strategic error can cost you the contest. Bob, W7YAQ, adds to this discussion and says he likes to run QRP so he can make enough QSOs to be focused without the pressure of trying to be competitive in the Low Power category. As he says, "In what other sport can an 80-year-old have so much fun?"

#### **Multi-Two**

Similar to the QRP scores, the top M2 logs took some extra legwork by the log checkers to get right. In the end, the remote team of W2FU edged out the iron man team of W4WF. The W2FU crew is a well-oiled machine in this contest. Their in-band operation while remote is done really well and their scores show that big hardware and practice really do produce results they can be proud of. The W4WF approach was very much a "classic" NAQP M2 with two opera-

tors each going the full 12 hours. It is really cool to see such different approaches achieve nearly identical scores. Propagation between the two stations was very different, with W4WF enjoying some of the southern high-band multiplier advantages, and W2FU capitalizing on the low-band QSO total advantage. With just one contact fewer than W2FU, the crew at N2NT came in with a fantastic third place effort. There were lots of great M2 efforts this year, with at least 10 of them operating remotely. It was great to see a big M2 entry from Puerto Rico by the operators at WP3TT.

A lot of stations used the name "Dave" in memory of Dave Pruitt, K8CC, who became SK in 2020. Dave was one of the instigators of the NAQP, an idea hatched during the wee hours in a hospitality room at the 1985 ARRL National Convention in Louisville, Kentucky. He was also part of the group that "reinvented" the NAQP in 1990, from which the current format was derived. (You can read about this in the November/December 1985 *NCJ* and the November/December 1990 *NCJ*.) Using "Dave" seemed an appropriate way to honor him.

---
